

CLEANING CLOTH

Features

- for removing silicone residue from the bonding surface of windscreens
- residue free

Areas of application

For cleaning and degreasing bonding surfaces before using adhesives and sealants.

TechnicalData

Base	99.9 % IPA isopropanol
Colours	clear
Flash time	10
Shelf life	24 Months
Application temperature	+5 - +35

Usage Instructions

Application temperature: +5°C to +35°C. Commercially available cleaning agents and glass cleaners are not suitable for pre-treatment in case of window adhesion. Lightly sand the bonding surface with the supplied abrasive fleece, and then thoroughly clean and degrease in one direction with the PETEC cleaning cloth. Depending on the amount of contamination, it may be necessary to repeat the process. All dirt, dust, oil, fat and wax must be removed from the bonding surface without leaving any residue. Also ensure that the surface to be treated is free from any silicone contamination. After air drying for approx. 10 minutes, the adhesive surface can be further processed (e.g. primer and activator or direct adhesive application). Follow the installation instructions and read the safety and technical data sheet. (Download PETEC installation instructions, data sheets and application videos at www.petec.de)
