

PLASTIC PRIMER SPRAY

Features

- short flash time
- colourless
- improved adhesion especially for plastics that are difficult to glue

Areas of application

Adhesive agent for improving the bonding of 1-component and 2-component adhesives on plastics. PETEC plastic primer improves the adhesion of adhesives, especially with low-energy or difficult-to-bond plastics, such as PE, PP, PU, PC, PA, EPDM, POM, Teflon, PTFE, PVC, Plexiglas, GRP and many more.

TechnicalData

Colours	clear
Flash time	5-10
Shelf life	36 Months
Application temperature	+5 - +30

Usage Instructions

Application temperature: +5°C to +30°C. Clean surfaces thoroughly and degrease well with PETEC Multi Cleaner (item no. 82100 or 82200). Shake can well before use. Apply an even coat of plastic primer from a distance of approx. 25 cm on the surface to be bond. Once the flash time* has passed, you can continue with glueing. Check on beforehand if compatible with the material. Read the safety and technical data sheet! (Download the PETEC data sheets from www.petec.de)
